

Ordinance Evaluation for Construction Site Storm Water Runoff Control

Ordinance currently in place: Article 11 of the Unified Development Code of Oconee County (UDC) incorporates the erosion control and storm water management ordinance. The E&S Act is adopted by reference in Section 1106.01 & the language automatically applies any amendments and/or updates so that the latest version is applicable.

Results of evaluation: The existing ordinance does adequately require erosion and sediment controls at construction sites, including sanctions for failure to comply. The ordinance requires construction site operators to control wastes at the construction site that may cause adverse water quality impacts.

Ordinance modifications: None needed at this time.
